03 Day Training Workshop on

Android Mobile Application Development

(22-24 September, 2013)

Mobile application development platforms have become a significant medium for software content delivery and distribution. Software houses in Pakistan have been quick to embrace this global trend and thus have created a demand for professionals with mobile application development skills in the local market as well. With the mainstream adoption of tablet devices and smart phones this potential is expected to grow at an exponential growth both globally and locally.

Keeping the aforesaid in view, Office of Research, Innovation and Commercialization at COMSATS Institute of Information Technology (CIIT) organized a 3 day workshop on 'Android Mobile Application Development' from 22-24 September 2013. The aim of this workshop was to give a conceptual and practical introduction to developing software applications on the Android mobile platform. Dr. Naveed Ahmad (Assistant Professor) and Mr. Muhammad Hassan Khan (Lecturer) were the resource persons of this training workshop. The participants included students and professionals from different universities of Islamabad.
